

COULTER ASSEMBLY

Strong & Robust

The McCoy Coulter Assembly is a high quality spring loaded, free wheeling unit designed for ease of use in a variety of applications. The standard unit is available in both RH and LH configurations and suits a standard 4" x 4" toolbar. The standard unit is available with either a straight or curved leg to cater for a number of mounting options.

The McCoy Coulter Assembly is fitted standard with a Boron steel 17" x 4mm Radial disc. This patented disc gives the unit outstanding trash cutting abilities in the most diverse soil conditions with only a minimum vertical force required for penetration. The asymmetrical linear wave shape allows the disc to self sharpen during use with minimum soil disturbance in both wet and dry soil conditions.

A positive feature to be considered when assessing your requirements is the robust design of the McCoy Coulter Assembly. Trash cutting is a key feature of the designed strength of this unit resulting in optimum performance in the field.
